Abstract (en)  
[origin: WO2019097325A1] The invention relates to a device (4) for supporting an electric current-conducting busbar (3) and electrically insulating the busbar (3) from a supporting structure (1), comprising: - a long rod insulator (18) for insulating the electric current, comprising a busbar-side end (40) and a supporting structure end (41) opposite the busbar-side end (40); - a busbar-side hinge plate (42) that is connected to the busbar-side end (40) in a force-fitting manner (50) and comprises a busbar-side base (44) and a busbar-side wall (46) which stands on the busbar-side base (44) and on which the long rod insulator (18) is held at a first angle (20) relative to the busbar-side base (44), and - a supporting structure-side hinge plate (43) that is connected to the supporting structure-side end (41) in a force-fitting manner (51) and comprises a supporting structure-side base (45) and a supporting structure-side wall (47) which stands on the supporting structure-side base (45) and on which the long rod insulator (18) is held at a second angle (22) relative to the supporting structure-side base (45).
