Abstract (en)
[origin: WO2019091707A1] The invention relates to a container closure for a beverage can, comprising an opening tab which is arranged on a can lid and can be pivoted about a pivot receiving area formed in a lid base (11). The opening tab is provided with a reaction surface (30) on the opening tab lower face facing the lid base (11) for contacting a liquid flowing out of the pouring opening (22). A sealing chamber is formed between a pouring protrusion (14) and the lid base (11) in the region of the reaction surface (30) and a closure piece (20) arranged in the lid base (11) such that the reaction surface (30) is arranged at least partly in the sealing chamber and is sealed from the surroundings.
