Abstract (en)

[origin: WO2019096435A1] The invention relates to an actuating device (10) for a manually actuatable winch (12) for operating a line (16). Here, a first end of an actuating lever (34, 74) is configured for interaction with the winch (12), and the actuating lever (34, 74) is substantially elongate. A line deflection element (40, 80) is mounted on the actuating lever (34, 74) at a predeterminable distance from the first end of the actuating lever (34, 74). Here, the actuating lever (34, 74) is connected to a resetting device by means of which a predeterminable force is exerted in a predeterminable direction on the actuating lever (34, 74). The invention also relates to a winch (12) having an actuating device (10) according to the invention.
