Abstract (en)

[origin: WO2019096967A1] The present invention relates to a process for producing mixed metal oxide particles, in which particles from parent compounds are converted by contactless energy input. The invention also relates to a process for coating bodies, preferably transition metal- or metal particles, transition metal- or metal oxide particles, transition metal- or mixed metal oxide particles, or silicon- or sulphur particles, especially preferably particles having a mass of less than one milligram and being in the form of grains, fibres, hollow fibres, or 2D structures, by heating with the exclusion of oxygen in the presence of a carbon source.
