Abstract (en)

[origin: WO2019096553A1] The invention relates to a device for recirculating (10) exhaust gas of a motor vehicle powertrain, comprising: a housing (101) for a system for removing exhaust gas pollutants (100); and a heat exchanger (102) exchanging heat between a cooling liquid and the exhaust gas and having a connection end fitting (11) with a tubular wall (12), which is driven into an outlet opening (108) of the housing of the pollutant removal system, characterised in that the device (10) comprises a casing (14) that can surround the tubular wall (12) of the connection end fitting.
