Abstract (en)

[origin: WO2019092384A1] The invention relates to a method for producing a thermal insulation barrier (2, 5) for a wall (1) of a thermally insulating and tight vessel built into a structural frame (3), said method comprising the step of: pushing an insulating stopper (44, 57, 58, 59, 60) in the direction of the structural frame (3), against a supporting body (15, 82, 91), so as to irreversibly damage the insulating stopper (44, 57, 58, 59, 60, 95, 96) where it presses against the supporting body (15, 82, 91) and to irreversibly reduce the dimension of the insulating stopper (44, 57, 58, 59, 60, 95, 96) between an inner end (48, 61) of the insulating stopper (44, 57, 58, 59, 60, 95, 96) and the point of pressure of the insulating stopper (44, 57, 58, 59, 60, 95, 96) against the supporting body (15, 82, 91), until the inner end (48, 61) of the insulating body (44, 57, 58, 59, 60, 95, 96) reaches a predetermined position inside said recess (43, 55). The invention also relates to a thermal insulation barrier (2, 5) produced in this way.
