Abstract (en)
A smoking substitute system comprising a heated tobacco device for operating the device in different modes. In particular, a heat not burn device is provided including a heater, wherein the device is configured to supply power to the heater from a power supply to supply a first power level for a first predetermined heating period, to raise a temperature of the heater to an operating temperature and to supply a second power level to maintain the temperature of the heater at the operating temperature, wherein the second power level is lower than the first power level.
