Abstract (en)  
A smoking substitute device (201) is described. The smoking substitute device comprises a housing including at least one aperture for light to be transmitted therefrom for user feedback; a printed circuit board ("PCB", 401) including at least one light source connected thereto, and; a controller for controlling the one or more light sources. The device also includes a light guide (404) connecting the at least one light source with the at least one aperture to transmit light from the light source to the aperture.
