Abstract (en)  
A heat-not-burn device, comprising: a controller; a heater; and a user interface; wherein the controller is configured to, based on a user selection received at the user interface, selectively enter into a locked operating mode or a standby operating mode, whereby the heater is deactivated in both operating modes; and wherein the controller is further configured to activate the heater upon receiving, at the user interface: i) a first predetermined user input when the device is entered in the locked operating mode or ii) a second predetermined user input different to the first predetermined user input when the device is entered in the standby operating mode.
