Abstract (en)
A smoking substitute system and method of operating a smoking substitute device are described. The smoking substitute device includes a user input means and a controller coupled to the user input means. The controller is configured to: identify an actuation sequence of input actuations provided by a user via the user input means. The actuation sequence has at least one input actuation of longer actuation duration and at least one input actuation of shorter actuation duration. The controller is configured to switch the device from a first state to a second state in response to completion of the actuation sequence.
