Abstract (en)  
[origin: EP3712544A1] A trim piece for a refrigerator shelf comprises a body extending in a longitudinal direction and a longitudinal cavity or channel having a U-shaped cross section, wherein the longitudinal cavity or channel has an upper wall and a lower wall formed along one of the longitudinal sides of the trim piece. The upper and lower walls are spaced apart from each other so as to receive a front edge of a refrigerator shelf by press fitting. Protruding portions in the form of tabs (15) are formed on the inner surfaces of either or both the upper and lower walls (13, 14) of the longitudinal cavity (12). Further tabs (16) are formed in the longitudinal cavity (12) at end portions (17, 18) of the body (11).
