Abstract (en)
[origin: WO2019101862A1] The invention relates to a guide device (1) for guiding and positioning a biopsy needle (100) at an injection site (101) on the body of a patient, wherein the guide device (1) has a base (2) and a needle holder (3), on which the biopsy needle (100) is guided along the longitudinal extent of same, wherein the position of the needle holder (3) relative to the base (2) can be changed. The invention proposes that the position of the needle holder (3) relative to the base can be changed in only two degrees of freedom (4, 5), wherein the biopsy needle (100) guided on the needle holder (3) always pierces the same injection site (101) when the position of the needle holder (3) relative to the base (2) changes.
