Abstract (en)

[origin: WO2019101878A1] The invention relates generally to coated glass-ceramic substrates having preferably high temperature resistance, high strength and a low coefficient of thermal expansion. Further aspects of the invention relate to a coating which comprises pores and is designed to be fluid-tight and is suitable for coating a temperature-resistant, high-strength glass-ceramic substrate having preferably low thermal expansion coefficients, and to a method for producing such a substrate.
