Abstract (en)
Disclosed is an aerosol delivery device comprising one or more passage walls defining an elongate passage (140) downstream of a vaporiser and extending along a longitudinal axis to an outlet. The device further comprises an elongate filter (174) extending longitudinally within the passage (140). An outer surface of the filter (174) is spaced from an internal surface of the one or more passage walls so as to define an elongate airflow path between the filter and the passage wall.
