Abstract (en)

[origin: CN111744641A] The invention relates to pretreatment equipment, in particular a crushing equipment. The crushing equipment comprises a filling unit (20). The filling unit can be filled with materials to be crushed. A screening unit (30) having a coarse screening section (32) is arranged downstream of or in the filling unit (20) in the conveying direction, wherein the coarse screening section (32) can be moved in a vibrating manner by means of a vibration drive (38), and wherein a part of the conveyed material is guided to an immediately following process unit, in particular crushing equipment, via the screening unit (30) and a further part of the conveyed material is screened out in the screening unit (30). In order to reduce the load on the process unit, according to the invention, a further screening section (24) is arranged in front of the screening unit (30) in the conveying direction, said further screening unit being driven by a vibration exciter (25), and a control device is provided, by means of which the vibration drive (38) and the vibration exciter (25) are actuated separately from each other.
