Abstract (en)
[origin: EP3715518A1] Plant for producing non-woven fabric, comprising a support structure (2) provided with a main channel (3) extended along a vertical axis (Y), a cooling station (8), which comprises a containment body (11) which is extended around the vertical axis (Y) delimiting a cooling chamber (12) within the main channel (3), cooling means in fluid connection with the cooling chamber (12) and adapted to introduce, into the cooling chamber (12), a first air flow (10) for cooling the filaments (7) susceptible of crossing the cooling chamber (12), and the containment body (11) comprises at least one movable portion (14) on the support structure (2); the plant also comprises actuator means (13) arranged for moving the movable portion (14) between a closed configuration, in which the containment body (11) perimetrically closes the cooling chamber (12) at least around the vertical axis (Y), and an open configuration, in which the at least one movable portion (14) defines at least one access opening (22) which connects the cooling chamber (12) to an outside environment.
