Abstract (en)
[origin: CN111733580A] The invention relates to an electric household device for producing steam, comprising: a boiler (10), heating means (20) for the boiler (10), supplying means (30) for supplying the boiler (10) with water, a scale collection device arranged in the boiler (10) and comprising at least one upper edge (41, 42), characterized in that the electric household device comprises means for measuring the waterlevel (50), connected to the means supply (30), so as to maintain a water level in the boiler (10) at a predetermined level (NP) sufficient to allow scale particles (80) contained in the water to passthrough- above said at least one upper edge (41, 42), so as to go into the scale collection device.
