Abstract (en)

Disclosed are a method of standing-by and starting-up television, a television and a computer-readable storage medium. The method of standing-by and starting-up television includes: in response to receiving a STR standby command, obtaining information of a hardware operating status of the television, and obtaining configuration information of a memory, wherein the memory is preset in a self-update mode; storing the information of the hardware operating status of the television in the memory, and storing the configuration information of the memory in a preset single-chip microcomputer; releasing hardware resource being used by the television and freezing a current process; controlling to power-off of hardware except the memory and the single-chip microcomputer, and allowing the television to enter a STR standby state. The power supply needs to be maintained for the memory and the single-chip microcomputer within the present disclosure, which reduces the overall power consumption of the television when it is in the STR standby mode, and enables the television to be in line with energy conservation and environmental protection.
