Abstract (en)

[origin: WO2019106275A1] The invention concerns a refill (2) intended to be inserted into a makeup case (1). The refill (2) comprises a vessel containing a liquid makeup, the vessel comprising a tank (6) comprising an open top face forming an opening for dispensing the makeup. The tank (6) is delimited by a side wall (18) in line with the opening and a bottom (22) of the tank. The refill (2) comprises an absorbent complex (7) in the tank (6). The vessel further comprises at least one additional volume (13) outside the tank (6), in fluid communication with the inside of said tank (6). This helps optimise the volume available for containing a liquid make-up, while allowing the latter to be effectively retained in the refill. The invention also concerns an assembly comprising a case (1) and such a refill (2).
