Abstract (en)
[origin: WO2019106246A1] The invention relates to a device for producing a pill organiser, comprising a mount (11), a table (16) having a hole through which a pill can be passed, an ejector pusher (22) that pushes back a receiving element of a pill blister arranged on the table, a chute extending beneath the through-hole, a frame for receiving a pill organiser to be filled, mounted such that it can move horizontally under the lower end of the chute, a motor-driven device, called a frame actuator, for positioning and moving the receiving frame, and a control unit connected to the pusher actuator and to the frame actuator for controlling the operation thereof. The invention also relates to a method implemented using such a device.
