Abstract (en)
[origin: WO2019102026A1] Disclosed is a two-component pressurized can comprising a body (2), a dome (3), a valve (4) disposed in the dome (3), a base (5) curved inwards and an opening device which is disposed in the base (5) and can be actuated from the outside (93) through the base; the can body (2) has a peripheral neck (15) to which is secured a separating disc (14) which separates the can into a lower (11) and upper compartment (12), wherein the separating disc (14) has a central opening which is sealed by a closing element (8) and the opening device can be moved against the closing element (8) by way of the actuating element (93) in order to remove the sealing element (8) from the separating disc (14).
