Abstract (en)

[origin: WO2019105927A1] The present invention concerns a mobile hot mix plant (1) comprising a rotationally symmetrical vessel (5) that is able to rotate about itself and is closed by a first end partition (5a) and a second end partition. The first end partition (5a) has a plurality of ventilation holes (7) arranged around the rotational axis (A) of the vessel (5), said ventilation holes (7) each having one opening. The first end partition (5a) comprises a plurality of deflectors, each deflector being associated with a ventilation hole (7) and arranged on the inner surface of the first end partition (5a) upstream from the opening of the associated ventilation hole (7) in the direction of rotation of the vessel (5), the first end partition (5a) being retractable. The present invention also relates to a method for producing a coated material using such a mix plant (1).
