Abstract (en)
[origin: WO2019069246A1] The invention relates to a spacer element (22) for supporting two yoke timbers (18) of a slab formwork (1), which run parallel to one another and are supported on props (12), in a transverse direction (4) transversely to the yoke timbers (18) and transversely to the props (12), comprising a beam element (24) having two opposite end sides, on which there are arranged bearing elements (26, 26') for taking up transverse forces in and against the transverse direction (4) from the yoke timbers (18), characterised by holding elements (33) on the end sides of the beam element (24) for fastening a net (27).
