Abstract (en)

[origin: WO2019102037A1] The invention relates to a telescoping linear actuator (2), in particular for a table system, comprises a linear drive (11), which is designed to move the linear actuator (2) over a total stroke distance (GH), the total stroke distance (GH) being composed of a main stroke distance (HH) and a secondary stroke distance (NH), and the linear actuator (2) being designed to move by the main stroke distance (HH) and by the secondary stroke distance (NH) sequentially.
