Abstract (en)  
[origin: WO2019154548A1] The icemaker (1) comprises an evaporator (2) equipped with a plurality of open cells (3) for the formation of ice elements (13), a sprayer (4) for spraying water into the cells (3), a tank (5) for collecting the water not transformed into ice in the cells (3), the sprayer (4) having an element (8) for occluding the cells (3) equipped with a plurality of calibrated holes (9), each for access to a corresponding cell (3) and a plurality of nozzles (10), each engaged in a corresponding access hole (9) for the injection of water into a corresponding cell (3), the sprayer (4) being supported by a support (11) in a movable manner between an opening position and a closing position of the cells (3) by means of the occlusion element (8), a kinematic mechanism for moving said support (11) also being provided externally to said collection tank (5).
