Abstract (en)

[origin: WO2019106074A1] Hearing aid device for application into the human auditory canal, comprising a sound receiving device adapted to receive ambient sound, a sound amplifying device adapted to amplify the ambient sound received by the sound receiving device, a sound playback device adapted to playback the ambient sound amplified by the sound amplifying device; wherein the sound playback device is further adapted to playback secondary sound originating from a secondary source different from the ambient sound; and a detecting device adapted to detect the time duration of the playback of the secondary sound.
