Abstract (en)
A capsule (10) for the preparation of beverages is described, comprising a cup-shaped body provided with:- a side wall (15) defining an upper opening (20) closed by a covering element (25),- a bottom wall (30), provided with at least one perforated portion (50F) to which a protection element (35) is associated, wherein the bottom wall (30) of the cup-shaped body has:- a peripheral flange (40), provided with a fixing surface (45) for the protection element (35), which delimits the perforated portion, and- an abutment element (50), which is derived from the bottom wall (30) itself along a direction (A) in the direction of movement away from the upper opening (20), provided with an abutment surface (55) adapted to contact said protection element (35).
