Abstract (en)

A vehicle headlamp includes a light source, a reflector having a reflection surface for reflecting light from the light source. A light emitting surface of the light source has a rectangular shape, a reflection film constituting the reflection surface on a body member formed by a resin material is arranged in the reflector, and the reflection surface includes segments arranged alongside via a division line in a left and right direction in a vehicle mounted state. The light from the light source is reflected from the plurality of segments to form irradiation patterns having mutually different shapes in a front irradiation region in the vehicle mounted state, and a division line at one side of the first segment in the right and left direction to form the irradiation pattern including an oblique cutoff line among the segments is inclined regarding the up and down direction in the vehicle mounted state.
