Abstract (en)
[origin: WO2019110422A1] The invention relates to a media application device, in particular an ink application device, comprising at least one media discharge unit (12a–2e; 12g) which has at least one nozzle unit (14a–14e; 14g) having at least one nozzle element (16a–16e; 16g; 16h; 106c, 108c, 110c), for discharging at least one medium onto at least one surface (18a), and comprising at least one electronic unit (20a; 20b) at least for controlling and/or regulating the media discharge unit (12a–2e; 12g). According to the invention, at least one nozzle parameter of the nozzle element (16a–16e; 16g; 16h; 106c, 108c, 110c) can be set and/or adjusted and/or the nozzle unit (14g) is formed as an oscillation nozzle unit, in particular as a piezo nozzle unit.
