Abstract (en)

[origin: WO2019110287A1] The invention relates to a method for producing a connecting element (40) comprising at least two ball-type sections (54, 56), wherein two ball-type sections are directly adjacent to one another or wherein two ball-type sections are connected to one another by a connection section, which method provides the step of rolling an integral blank that is cylindrical, at least in part, between at least two rolling tools, and the step of shaping the at least two ball-type sections and optionally the connection section during the rolling. The invention also relates to a connecting element and a rolling tool for producing a connecting element.
