Abstract (en)
[origin: WO2019110878A1] A method for controlling positions for the automatic redeployment of a motorised retractable steering wheel (8), in a vehicle equipped with an autonomous driving system and an internal camera (10) turned towards the driver's space (2), this method measuring, with data originating from the camera (10), during a redeployment of the steering wheel (8) for manual driving of the vehicle, a distance between the steering wheel (8) and the driver (2) or his or her seat (4), and, in the event of this measured distance reaching a minimum safety distance, requesting a stop to the motorisation of the retractable steering wheel (8). - Figure 1 -
