Abstract (en)

[origin: WO2019110704A1] The invention relates to a packaging machine for producing packs having a group (23) of cigarettes as pack content, having individual production units (11-16) arranged beside one another in a production line, each of which production units can be separated from one another (without destruction) and removed from the production line as required in the region of or along (imaginary) separating planes between the same, wherein the packing machine can be changed, by removing at least one separable production unit (7-16) from the production line, by replacing at least one separable production unit (11-16) by another separable production unit (11-16) and/or by adding at least one further separable production unit (11-16) to the production line, from a first configuration, in which a first pack type can be produced, to a second configurations, in which a second pack type different from the first pack type can be produced.
