Abstract (en)  
[origin: WO2019112450A1] The present invention relates to a curtain wall (1) of a building, comprising a number of pillars (2) fixed to the building, a number of glass pane assemblies (4) disposed between said pillars (2), each comprising an inner pane (41) and an outer pane (42) separated with spacing means (43) at the perimeter thereof, wherein at their perimetric faces parallel to the longitudinal axes of the pillars (2) said glass pane assemblies (4) are provided with longitudinal mounting grooves (44), and a number of connectors (3) engaging said grooves (44) and fixing adjacent glass pane assemblies (4) to said pillars (2). In order to minimize thermal bridging between the neighbouring glass pane assemblies (4) said pillar (2) is provided with a mounting slot (25), said connector (3) is a longitudinal L-shaped profile having a first fixing portion (31) disposed inside said mounting slot (25) of said pillar (2) and a second fixing portion (32) disposed within said groove (44) of said glass pane assembly (4), wherein said connectors (3) are disposed in sequence with the second fixing portions (32) projecting at the opposite sides, and the gaps between the adjacent glass pane assemblies (4) are thermally insulated.
