Abstract (en)
[origin: WO2019162097A1] A valve device having a feed connector (ZA) of a feed side for the supply of a hydraulic consumer which can be connected to the feed connector (ZA) with pressure fluid, an outlet connector (AA) of an outlet side for the discharge of pressure fluid from the consumer which can be connected, wherein, depending on the actuating direction of said consumer, the feed side changes into the outlet side and the outlet side changes into the feed side, a pressure supply connector (P), and a return flow connector (T), is characterized in that a pressure regulating device acts on the respective feed side and a volumetric flow regulating device acts on the respective outlet side.
