Abstract (en)

[origin: WO2019110174A1] A connection system (10) is used to connect at least one sensor cable (12) to an electrical connection cable (14). The system comprises a sleeve (22) and a grommet (24) located inside the sleeve (22), at least part of said grommet being made of an elastically deformable material. According to the invention, the grommet (24) comprises at least one through-opening (38) for receiving a coupling section (20) which electrically couples cable ends of the sensor cable (12) and the connection cable (14). Also, according to the invention, at least part of the sleeve (22) is produced from a plastically deformable material and the grommet (24) is fixed in the sleeve (22) by at least one section (34, 36) of the sleeve (22), the section being deformed plastically towards the grommet (24).
