Abstract (en)
[origin: WO2019135673A1] A lighting system (1) comprises buffered (3, 3s) and non-buffered (2) power lines. At least one lighting unit (1 10) receives power from a non-buffered power line, and is adapted to transmit a communication signal either continuously or repetitively. At least one lighting unit (10) receives power from a buffered power line, and is adapted to monitor receipt of the communication signal and to reduce light output if it does not receive the communication signal.
