Abstract (en)

[origin: EP3723039A1] A work device 20 includes, at a tip, one of different types of tip attachments 25 that are replaceable with each other. A camera 40 can capture an image within a movable range of the tip attachment 25. The work device posture sensor 30 detects the posture of the work device 20. A controller 60 sets a detection frame (F) that is a frame of a range including the tip attachment 25 in the image captured by the camera 40 based on the posture of the work device 20 detected by the work device posture sensor 30. The controller 60 discriminates the type of the tip attachment 25 based on the image of the tip attachment 25 within the detection frame (F).
