Abstract (en)
[origin: GB2569368A] The application discloses a heat not burn consumable 1 (also known as a non-combustible cigarette). The consumable comprises a vapour generating member 7 (VGM) preferably a tubular sheet of reconstituted tobacco with a channel defined inside. The consumable comprises a mixing zone (or cooling/aerosol chamber) downstream of the VGM. The consumable further comprises a wrapper that covers the VGM and at least a portion of the mixing zone. Preferably, a passageway extends from the inlet to an outlet at the other end of the consumable, where the channel forms at least a portion of said passageway. Also preferably, the portion actively heated of the VGM is between 10-35mm and the total length of the consumable is between 50-100mm. Preferably the VGM has a thickness less than 1.5mm. Preferably, the consumable comprises 100-1000mg of tobacco with between 0.2-2.0 milligrams of nicotine. Also preferably, the passageway comprises 20-40% of the total length of the consumable.
