Abstract (en)

[origin: GB2569611A] A hair-curling device comprises a substantially toroidal main body 2 having an aperture (3, fig.4) through which a length of hair to be curled may be extended. The device has at least one hair-curling loop 4 located adjacent to the main body. An attachment means (9, fig.8) is provided to attach the hair-curling loop(s) to the main ring. The attachment means may have free ends which are attached around the main body by a fastener (6a, fig. 2). The hair curling device may comprise a single hair curling loop which is sized to fit concentrically over the main body once the hair has been wrapped around it (see figure 10). The main body may have a groove (15, fig.11) formed therein to accommodate the hair curling loop.
