Abstract (en)

[origin: WO2019116125A1] Name: Device for the application of injections Device for the application of injections consists of a body (1) which contains fixtures (2) with a scale and sprockets in its upper part and a flat surface (5) in its lower part, where a central canal (3) leads through the body (1) from top to bottom. The central canal (3) is used to hold a syringe, and is extended in its lower part (6), whereas the flat surface (5) and body (1) contain a canal (4) for the removal of air. The body (1) of the device has a round side part (7) and is cut open on the back to make it easier to insert the syringe.
