Abstract (en)  
[origin: WO2019115135A1] The invention relates to a vehicle wheel (10) having a rim (2) consisting of sheet steel for receiving a tire and a wheel disk (1) made of sheet steel, permanently connected to the rim (2) and having a connection region (1.1) for detachable connection to a wheel carrier, having a design element (3) made of metal, which can be or is frictionally, interlockingly and/or integrally connected to the wheel disk (1) and/or the rim (2), wherein the design element (3), in comparison to the wheel disk (1), has a lower material strength and a material thickness which is lower by at least a factor of 2 and/or a material density which is lower by at least a factor of 2, wherein the design element (3) covers the connection region (1.1) of the wheel disk (1) at least in regions.
