Abstract (en)  
[origin: WO2019115961A1] The invention relates to a bottle having: firstly a rigid external shell, which has a shell body continued by a neck provided with a neck opening, and is equipped with a cap that is fitted on the neck opening and has a threaded internal annular part inside this neck opening, this shell being made of a cylindrical braid of vegetable fibres having a uniform appearance over the entire body of the shell and of the neck, said braid covering at least 90% of the surface thereof and being inserted into an impregnation matrix made of a thermoplastic resin, and secondly an internal container intended to come into contact with the beverage, said internal container being fastened to the internal annular part of the cap and being made of a thermoplastic material.
