Abstract (en)
[origin: WO2019115326A1] The invention is directed to a closure (1) for a liquid container comprising a base portion (2). The base portion (2) comprises a top deck (3) with a spout (4) extending in an upper direction (z) away from the top deck (3) and an outer skirt (5) extending from an outer end (6) of the top deck (3) in a lower direction away from the top deck (3). A circumferential recess (8) is running around the spout (4) comprising a radially outer first side surface (9) and a radially inner second side surface (10) and first locking means (11). A top portion (12) comprises an annular base (13) and a cover (14) with an outer wall (23) interconnected to the annular base (13) by a hinge (15). The annular base (13) comprises a radially outer first side surface (16) and radially inner second side surface (17) and second locking means (18). In an assembled position the annular base (13) of the top portion (12) is arranged in the circumferential recess (8) of the base portion (2) and the first and the second locking means (11, 18) interact with each other locking the cover (14) with respect to the base portion (2).
