Abstract (en)  
[origin: WO2019118325A1] The present disclosure relates generally to compounds comprising oligonucleotides complementary to Leucine-Rich-Repeat-Kinase (LRRK2) RNA transcript Certain such compounds are useful for hybridising to a LRRK2 RNA transcript, including but not limited to a LRRK2 RNA transcript in a cell. In certain embodiments, such hybridization results in modulation of splicing of the LRRK2 transcript In, certain embodiments such compounds are used to treat one or more symptoms associated with Parkinson's disease.
