Abstract (en)
[origin: WO2019115460A1] Articulated arm (10) for outdoor awnings, which comprises: - a first longitudinally extended element (11), to be connected with one of its ends to a supporting structure and provided with elastic tensioning means (13) which are accommodated at least partially inside it, - a second longitudinally extended element (12), to be connected rotatably on one side of the first longitudinally extended element (11), with the rotation fulcrum (30) in a region comprised between the two ends of the first element (11), - an elongated flexible element (14) adapted to connect the elastic tensioning means (13) to the second longitudinally extended element (12), surrounding at least partially the region in which the fulcrum (30) is located.
