Abstract (en)
[origin: WO2019115940A1] The present invention relates to a tool for spreading a plaster on a surface, comprising a gripping means attached to a plate extending in a first direction and a second direction orthogonal to the first direction, said plate comprising a working surface and a gripping surface, characterized in that the working surface has a radius of curvature making it convex, this radius of curvature being constant in the first direction, and in that said plate is made of a plastics material.
