Abstract (en)

[origin: EP3725501A1] The molding device comprises mold shells (11) and a gasket (13) for manufacturing by molding an ophthalmic lens configured to be worn by a wearer, said mold shells (11) each having a molding face and a peripheral side (16) and said gasket comprising a closed loop portion (20) sandwiched between said molding faces and remotely to said peripheral sides (16), thereby forming a molding cavity (29) of said ophthalmic lens (31) inside said closed loop portion (20) of said gasket (13), said gasket (13) comprising a plurality of elongated positioning members (21, 22, 23) each projecting externally from said closed loop portion and each being fastened on a said peripheral side (16) of at least one of said mold shells (11), said elongated positioning members each having a respective length which is determined in function of an optical axis (34) characteristic of said wearer.
