Abstract (en)
[origin: WO2019122544A1] The invention relates to a cryotherapy device including a cabin for treating a person, connected to a system for producing and transporting a cryogenic fluid, said system including at least one tank for storing a pressurised cryogenic liquid supplying, through means for diffusing said liquid, an evaporation pipe leading, through gas-diffusion means, into said treatment cabin; - means for circulating the cryogenic fluid, having heating means upstream and said evaporation pipe downstream, characterised in that: - said storage tank comprises a cryogenic liquid kept at a pressure of 1 to 1.5 bars; and - said evaporation pipe, which extends from said at least one storage tank to said gas-diffusion means, has a contraction.
