Abstract (en)

[origin: WO2019122660A1] A process for producing biomethane (40) by purification of a biogas feed stream (1), comprising the following steps: Step a): introduction of the feed gas stream (1) into a pretreatment unit (5) in which said gas stream is partially separated from the CO₂ and the oxygen that it contains and is compressed at a pressure P1 greater than 50 bar abs; Step b): the gas stream to be treated (22) resulting from step a), depleted of CO₂, is subjected to cryogenic separation by introducing it into a distillation column (26) in order to separate the nitrogen from said gas stream to be treated; Step c): a stream (27) enriched with CH₄ resulting from the cryogenic separation is recovered by pumping the bottom product (37) of said column (26) at a pressure P2 greater than the critical pressure of said product, characterized in that said gas stream resulting from step a), depleted of CO₂, used in step b) comprises between 0.3 mol% and 2 mol% of CO₂.
