Abstract (en)
[origin: WO2019120925A1] The invention relates to a wall saw having a locking device (41). A saw-blade flange (25) of the wall saw is adjustable by means of the locking device (41) between a locked state and an unlocked state, wherein the saw-blade flange (25) is connected to the drive spindle (33) for conjoint rotation in the locked state and is adjustable with respect to the drive spindle (33) in the unlocked state. In the unlocked state of the saw-blade flange, the drive spindle is blocked in the direction of rotation of the saw blade and is configured to be rotatable about the axis of rotation in an opposite direction directed counter to the direction of rotation.
